

Attio

Attio is a modern CRM for organising contacts, companies, relationships, pipelines, and follow-ups.

Attio's USP is its integrated AI utilisation for CRM

- **Build relationship lists** for warm brand contacts, active agency conversations, key partners, sponsors, venues, creators, or collaborators.
- **Track who at JAA owns each relationship**, so it is clear who is responsible for each brand, agency, partner, or opportunity.
- **See the full relationship history** for a person or company, including past emails, meetings, notes, last contact date, and agreed next steps.
- **Create non-sales pipelines** for partnerships, sponsorships, event outreach, talent conversations, press opportunities, or venue discussions.
- **Connect people, companies, agencies, events, and opportunities together** so relationships are mapped properly
- **Identify important contacts that need chasing**, such as people who have not been contacted recently or opportunities with no next step.
- **Organise JAA's wider network** of brands, agencies, creators, venues, sponsors, clients, and collaborators in one shared system.
- **Use AI to summarise relationship context** before meetings, calls, follow-ups, or introductions.
- **Track warm leads and introductions**, including who made the intro, where the relationship came from, and what should happen next.
- **Give the team a shared view of relationship status**, instead of relying on individual inboxes, spreadsheets, or memory.

- Attio is not built for bulk mailers or newsletters.
- Attio does not replace HubSpot's email campaign tools.
- Attio is weaker for unsubscribes, preferences, and consent.
- Attio is weaker for opens, clicks, and campaign reporting.
- Attio is less useful for marketing segments and audience targeting.
- Attio does not replace HubSpot's forms, landing pages, or nurture journeys.
- Attio would need another email platform for regular mailers.
- Attio is not a like-for-like HubSpot replacement for how we currently use it.
